How strong are your passwords?

Passwords should be...

1. **Long**
   - Use a passphrase made up of four or more unrelated words.
   - BeastModeNowActivated

2. **Secure**
   - Keep your passwords to yourself. Make them hard to guess: people can find your personal information, so make it random.

3. **Unique**
   - Use a different password for every account. A password manager can help you.
